Antibody-independent affinity strategies for the capture of circulating tumor cell: ligands, capture and release

F Li, Q Wen, H Xu, Y Zhao - Talanta, 2025 - Elsevier

Cancer is the leading cause of death worldwide, primarily due to metastasis. Circulating tumor cells (CTCs) are a pivotal component of cancer metastasis. As important biomarker in …

N-glycosylation of mannose receptor (CD206) regulates glycan binding by C-type lectin domains

K Stavenhagen, AY Mehta, L Laan, C Gao… - Journal of Biological …, 2022 - jbc.org

The macrophage mannose receptor (MR, CD206) is a transmembrane endocytic lectin receptor, expressed in selected immune and endothelial cells, and is involved in immunity …

Trends in oligomannosylation and α1, 2-mannosidase expression in human cancers

S Chatterjee, J Ugonotti, LY Lee, A Everest-Dass… - …, 2021 - pmc.ncbi.nlm.nih.gov

Aberrant protein glycosylation is a prominent cancer feature. While many tumour-associated glycoepitopes have been reported, advances in glycoanalytics continue to uncover new …

Immune implications and therapeutic opportunities of tumor glycosylation

R Hatinguais, S Verjans, J Gomes, SJ van Vliet - Nature Cancer, 2026 - nature.com

Aberrant glycosylation is a nearly universal hallmark of cancer cells. Tumor-associated glycans can reshape cancer cell biology and act as crucial suppressors of anti-tumor …

Trimmed n-glycans define aggressive gastric cancer and predict clinical outcomes

D Ferreira, B Marinho-Santos, M Relvas-Santos… - …, 2025 - pmc.ncbi.nlm.nih.gov

Rationale: Gastric cancer (GC) is a leading cause of cancer-related mortality, particularly in advanced stages where prognosis and targeted treatment remain challenging. The …

Glycomics and glycoproteomics reveal distinct oligomannose carriers across bladder cancer stages

M Relvas-Santos, D Ferreira, A Brandão… - International Journal of …, 2025 - mdpi.com

Aberrant glycosylation is a hallmark of cancer, offering opportunities to enhance clinical decision-making and enable precise targeting of cancer cells. Nevertheless, alterations in …

Rapid prediction of cervical cancer and high-grade precursor lesions: An integrated approach using low-field 1H NMR and chemometric analysis

LQ de Souza Leão, JC de Andrade, GM Marques… - Clinica Chimica …, 2025 - Elsevier

Cervical cancer (CC) is a significant cause of morbidity and mortality in women, often preceded by high-grade cervical intraepithelial lesions (HSIL). Although conventional …

Fluorescent probes for intraoperative navigation in glioma resection: recent advances and perspectives

Y Zhang, P Wei, D Yan, Z Li, P Li - Coordination Chemistry Reviews, 2026 - Elsevier

Gliomas comprise a heterogeneous group of primary central nervous system tumors, ranging from lower-grade diffuse gliomas to highly aggressive high-grade gliomas, with …

Glycoproteomics landscape of asymptomatic and symptomatic human Alzheimer's disease brain

S Suttapitugsakul, K Stavenhagen… - Molecular & Cellular …, 2022 - mcponline.org

Molecular changes in the brain of individuals afflicted with Alzheimer's disease (AD) are an intense area of study. Little is known about the role of protein abundance and …

One-Step Microfluidic Manufactured Fucose-Decorated Sweetosomes Choose the Time and the Road for Their Intracellular Journey to Cancer Treatment

M Tiboni, M Montanari, S Khorshid… - Advanced …, 2026 - Wiley Online Library

Carbohydrate-functionalized liposomes are promising drug-delivery systems due to their biocompatibility, biodegradability, low toxicity, and ability to mediate targeted cell …
