Biomedical applications of engineered heparin-based materials

EN Zare, D Khorsandi, A Zarepour, H Yilmaz… - Bioactive Materials, 2024 - Elsevier

Heparin is a negatively charged polysaccharide with various chain lengths and a hydrophilic backbone. Due to its fascinating chemical and physical properties, nontoxicity …

Biological and medicinal significance of benzofuran

RJ Nevagi, SN Dighe, SN Dighe - European journal of medicinal chemistry, 2015 - Elsevier

This article emphasizes on the importance of benzofuran as a biologically relevant heterocycle. It covers most of the physiologically as well as medicinally important …

Chitosan-and heparin-based advanced hydrogels: Their chemistry, structure and biomedical applications

SZ Safi, S Fazil, L Saeed, H Shah, M Arshad… - Chemical Papers, 2024 - Springer

Chitosan and heparin are two biopolymers with different properties that can be combined to develop biomaterials with unique and desirable characteristics. Chitosan is a cationic …

Recent advances in the discovery and development of factor XI/XIa inhibitors

RA Al-Horani, DK Afosah - Medicinal research reviews, 2018 - Wiley Online Library

Abstract Factor XIa (FXIa) is a serine protease homodimer that belongs to the intrinsic coagulation pathway. FXIa primarily catalyzes factor IX activation to factor IXa, which …

Designing smaller, synthetic, functional mimetics of sulfated glycosaminoglycans as allosteric modulators of coagulation factors

EI Abdelfadiel, R Gunta, BK Villuri… - Journal of Medicinal …, 2023 - pmc.ncbi.nlm.nih.gov

Natural glycosaminoglycans (GAGs) are arguably the most diverse collection of natural products. Unfortunately, this bounty of structures remains untapped. Decades of research …

Recent advances on plasmin inhibitors for the treatment of fibrinolysis-related disorders

RA Al-Horani, UR Desai - Medicinal research reviews, 2014 - Wiley Online Library

Growing evidence suggests that plasmin is involved in a number of physiological processes in addition to its key role in fibrin cleavage. Plasmin inhibition is critical in preventing …

Design and synthesis of s-triazine-Isatin hybrids with potent anticancer activity, targeting A549 lung adenocarcinoma via EGF inhibition

HH Al-Rasheed, SA Al-Khamis, A Barakat, AA Masoud… - Tetrahedron, 2025 - Elsevier

Merging s-triazine and isatin via a hydrazone linkage an efficient strategy to access new potential anticancer derivatives. Consequently, herein we report a new library of fifty new …

Inhibitors of blood coagulation factor XIII

T Schmitz, CA Bäuml, D Imhof - Analytical biochemistry, 2020 - Elsevier

The blood coagulation factor XIII (FXIII) plays an essential role in the stabilization of fibrin clots. This factor, belonging to the class of transglutaminases, catalyzes the final step of …

Designing allosteric inhibitors of factor XIa. Lessons from the interactions of sulfated pentagalloylglucopyranosides

RA Al-Horani, UR Desai - Journal of Medicinal Chemistry, 2014 - pmc.ncbi.nlm.nih.gov

We recently introduced sulfated pentagalloylglucopyranoside (SPGG) as an allosteric inhibitor of factor XIa (FXIa)(Al-Horani et al.,). To better understand the SPGG–FXIa …

Allosteric inhibition of α-thrombin enzymatic activity with ultrasmall gold nanoparticles

AL Lira, RS Ferreira, RJS Torquato, MLV Oliva… - Nanoscale …, 2019 - pubs.rsc.org

The catalytic activity of enzymes can be regulated by interactions with synthetic nanoparticles (NPs) in a number of ways. To date, however, the potential use of NPs as …
