Identification of proteins and N-glycosylation sites of knee cartilage in Kashin-Beck disease compared with osteoarthritis

Y Lyu, H Deng, C Qu, L Qiao, X Liu, X Xiao, J Liu… - International journal of …, 2022 - Elsevier

The aim of this study was to identify crucial proteins and N-glycosylated sites in the pathological mechanism of Kashin-Beck disease (KBD) compared with osteoarthritis (OA) …

RNAseq analysis of FABP4 knockout mouse hippocampal transcriptome suggests a role for WNT/β-catenin in preventing obesity-induced cognitive …

SW So, JP Nixon, DA Bernlohr, TA Butterick - International journal of …, 2023 - mdpi.com

Microglial fatty-acid binding protein 4 (FABP4) is a regulator of neuroinflammation. We hypothesized that the link between lipid metabolism and inflammation indicates a role for …

The 'sugar'side of extracellular vesicle—glycome: a panorama from basic characteristics, deciphering technologies, functions, to applications

Y Yan, Y Zhu, Y Wang, L Dai, L Zou, Z Wang - Journal of …, 2026 - Springer

Abstract Background Extracellular vesicles (EVs) represent a heterogeneous group of lipid-enclosed vesicular structures. Despite their tiny bodies, EVs harbor a rich repertoire of …

Decoding glycosylation potential from protein structure across human glycoproteins with a multi-view recurrent neural network

BP Kellman, J Mariethoz, Y Zhang, S Shaul, M Alteri… - BioRxiv, 2024 - pmc.ncbi.nlm.nih.gov

Glycosylation is described as a non-templated biosynthesis. Yet, the template-free premise is antithetical to the observation that different N-glycans are consistently placed at specific …

Two closely related β-1, 2-xylosyltransferases differentially impact cryptococcal glycan synthesis

D Boodwa-Ko, JS Klutts, K Aoki, ML Skowyra, I Bose… - mBio, 2026 - journals.asm.org

Cryptococcus neoformans is an opportunistic fungal pathogen that causes pulmonary infection in immunocompromised patients, which in severe cases leads to fatal …

GNOme, an ontology for glycan naming and subsumption: Zhang et al.

W Zhang, M Vesser, N Edwards - Analytical and Bioanalytical Chemistry, 2025 - Springer

While GlyTouCan provides stable identifiers for referencing glycan structures, they are not organized semantically. GNOme, a glycan naming and subsumption ontology and a …

Deep Intact Glycoproteomic Analysis Reveals Multi-Level Glycosylation Heterogeneity in Renal Tumors

FJ Garcia-Marques, KL Kapp, A Bermudez… - Molecular & Cellular …, 2026 - Elsevier

Extensive changes in glycosylation are observed in many malignancies, but limited information is available about the modified proteins and sites. We used intact …

RCSB Protein Data Bank resources for structure-facilitated design of mRNA vaccines for existing and emerging viral pathogens

DS Goodsell, SK Burley - Structure, 2022 - cell.com

Structural biologists provide direct insights into the molecular bases of human health and disease. The open-access Protein Data Bank (PDB) stores and delivers three-dimensional …

Glycoinformatics

KF Aoki-Kinoshita, MP Campbell… - … [Internet]. 4th edition, 2022 - ncbi.nlm.nih.gov

Glycans are branched, biosynthetic metabolic products that are commonly encoded by multiple genes. Unique genes may be involved in the biosynthesis of specific glycan classes …

Forward genetic screens of human glycosylation pathways using the GlycoGene CRISPR library

A Kelkar, T Groth, S Neelamegham - Current Protocols, 2022 - Wiley Online Library

CRISPR-Cas9-based forward genetic screens represent a powerful discovery platform to uncover genes regulating specific biological processes. This article describes a method for …
