### Contemporary human H3N2 influenza a viruses require a low threshold of suitable glycan receptors for efficient infection

CM Spruit, IR Sweet, JCL Maliepaard… - …, 2023 - academic.oup.com

Recent human H3N2 influenza A viruses have evolved to employ elongated glycans terminating in α2, 6-linked sialic acid as their receptors. These glycans are displayed in low …

### SARS-CoV-2 and other coronaviruses bind to phosphorylated glycans from the human lung

L Byrd-Leotis, Y Lasanajak, T Bowen, K Baker, X Song… - Virology, 2021 - Elsevier

Abstract SARS-CoV, MERS-CoV, and potentially SARS-CoV-2 emerged as novel human coronaviruses following cross-species transmission from animal hosts. Although the …

### Complex *N*-glycans are important for interspecies transmission of H7 influenza A viruses

CM Spruit, DI Palme, T Li, M Ríos Carrasco… - Journal of …, 2024 - journals.asm.org

Influenza A viruses (IAVs) can overcome species barriers by adaptation of the receptor-binding site of the hemagglutinin (HA). To initiate infection, HAs bind to glycan receptors with …

### Tools for generating and analyzing glycan microarray data

AY Mehta, J Heimburg-Molinaro… - Beilstein journal of …, 2020 - beilstein-journals.org

Glycans are one of the major biological polymers found in the mammalian body. They play a vital role in a number of physiologic and pathologic conditions. Glycan microarrays allow a …

### Examining the Influenza A Virus Sialic Acid Binding Preference Predictions of a Sequence-Based Convolutional Neural Network

LK Borkenhagen, JA Runstadler - Influenza and Other …, 2024 - Wiley Online Library

Background Though receptor binding specificity is well established as a contributor to host tropism and spillover potential of influenza A viruses, determining receptor binding …

### Dominant HA motif 131/132-NT shapes the phenotype of avian H9N2 influenza virus by modulating agglutination property, receptor specificity and infectivity …

X Chen, J Dong, C Zhao, L Wang, X Gao, Z Li, H Sun… - Virologica Sinica, 2026 - Elsevier

ABSTRACT H9N2 avian influenza viruses (AIVs), which are enzootic in poultry and possess spillover potential to humans, represent a considerable global public health threat. Since …

### Influenza virus infections in polarized cells

B Praena, XF Wan - Viruses, 2022 - mdpi.com

In humans and other mammals, the respiratory tract is represented by a complex network of polarized epithelial cells, forming an apical surface facing the external environment and a …

### Molecular epidemiology and glycomics of swine influenza viruses circulating in commercial swine farms in the southeastern and midwest United States

AA Bakre, LP Jones, CS Kyriakis, JM Hanson… - Veterinary …, 2020 - Elsevier

Tracking the genetic diversity and spread of swine influenza viruses (SIVs) in commercial swine farms is central for control and to reduce the potential emergence of SIV reassortants …

### Antibody-free detection of influenza viruses on a microarray to study their receptor specificity

NV Shilova, DR Yermolaeva, AY Nokel, AA Chinarev… - Archives of …, 2026 - Springer

A convenient tool for identifying glycan receptors of new influenza virus strains is the PGA (printed glycan array), which contains up to a hundred sialoglycans. However, antigen …

### CHARACTERIZATION OF IN VITRO FITNESS AND ANTIGENIC DRIFT DIFFERENCES BETWEEN CIRCULATING H1N1 INFLUENZA CLADES

N Swanson - 2024 - jscholarship.library.jhu.edu

Influenza viruses are a significant contributor to morbidity and mortality, with multiple subtypes circulating seasonally and causing annual epidemics. New viral clades emerge …
