A photo-cross-linking GlcNAc analog enables covalent capture of N-linked glycoprotein-binding partners on the cell surface

H Wu, A Shajahan, JY Yang, E Capota, AM Wands… - Cell chemical …, 2022 - cell.com

N-glycans are displayed on cell-surface proteins and can engage in direct binding interactions with membrane-bound and secreted glycan-binding proteins (GBPs) …

O-GlcNAcylation of DJ-1 suppresses ferroptosis in renal cell carcinoma by affecting the transsulfuration pathway

Z Yan, Y Li, M Wang, K Xu, Y Liu, L Wang, H Luo… - International …, 2025 - Elsevier

Renal cell carcinoma (RCC) is one of the most common urological malignancies worldwide, and advanced patients often face challenges with chemotherapy resistance and poor …

Databases and bioinformatic tools for glycobiology and glycoproteomics

X Li, Z Xu, X Hong, Y Zhang, X Zou - International Journal of Molecular …, 2020 - mdpi.com

Glycosylation plays critical roles in various biological processes and is closely related to diseases. Deciphering the glycocode in diverse cells and tissues offers opportunities to …

Combatting cellular immortality in cancers by targeting the shelterin protein complex

S Chakraborty, S Banerjee - Biology Direct, 2024 - Springer

Abstract Shelterin proteins (TERF1, TERF2, TPP1, TINF2, POT1) protect telomeres, prevent unwarranted repair activation, and regulate telomerase activity. Alterations in these proteins …

The Data Distillery: a graph framework for semantic integration and querying of biomedical data

TM Ahooyi, B Stear, JA Simmons, VT Metzger… - …, 2025 - pmc.ncbi.nlm.nih.gov

The Data Distillery Knowledge Graph (DDKG) is a framework for semantic integration and querying of biomedical data across domains. Built for the NIH Common Fund Data …

Polypeptide N-acetylgalactosaminyltransferase (GalNAc-T) isozyme surface charge governs charge substrate preferences to modulate mucin type O-glycosylation

CJ Ballard, MR Paserba, EJ Paul Daniel… - …, 2023 - academic.oup.com

A large family of polypeptide N-acetylgalactosaminyltransferases (GalNAc-Ts) initiate mucin type O-glycosylation transferring α-GalNAc from a UDP-GalNAc donor to the hydroxyl …

Glycosaminoglycan microarrays for studying glycosaminoglycan–protein systems

JE Chittum, A Thompson, UR Desai - Carbohydrate Polymers, 2024 - Elsevier

More than 3000 proteins are now known to bind to glycosaminoglycans (GAGs). Yet, GAG–protein systems are rather poorly understood in terms of selectivity of recognition, molecular …

Doc2agent: Scalable generation of tool-using agents from api documentation

X Ni, H Jian, Q Wang, VC Shah, P Hong - arXiv preprint arXiv:2506.19998, 2025 - arxiv.org

REST APIs play important roles in enriching the action space of web agents, yet most API-based agents rely on curated and uniform toolsets that do not reflect the complexity of real …

Multivalent interactions between fully glycosylated influenza virus hemagglutinins mediated by glycans at distinct N-glycosylation sites

R Li, J Gao, L Wang, M Gui, Y Xiang - npj Viruses, 2024 - nature.com

The hemagglutinin (HA) glycoprotein of influenza virus binds host cell receptors and mediates viral entry. Here we present cryo-EM structures of fully glycosylated HAs from …

Glycoprotein-Notebook: A Pan-Cancer Glycoproteomic Database and Toolkit for Analysis of Protein Glycosylation Changes Associated With Cancer Phenotypes

H Zhang, T Hoang, Y Hu - Molecular & Cellular Proteomics, 2025 - mcponline.org

Protein glycosylation plays a pivotal role in various biological processes, and the analysis of intact glycopeptides (IGPs) has emerged as a powerful approach for characterizing …
