RE: Employment Letter Confirming Dr. Akul Yugesh Mehta's Position at Beth Israel Deaconess Medical Center

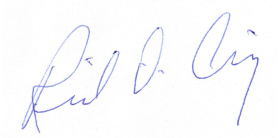

Dear USCIS Officer,

In my capacity as Professor of Surgery of the Department of Surgery at Beth Israel Deaconess Medical Center, I write this letter to verify that in November of 2021, Dr. Akul Yugesh Mehta began employment as an Instructor of Surgery, Staff scientist I in the Department of Surgery at the Beth Israel Deaconess Medical Center. This position follows his previous appointment in the same department as a research scholar.

The position of Instructor of Surgery, Staff scientist I offered to Dr. Mehta is a research position. As an Instructor of surgery, Staff scientist I, Dr. Mehta is responsible for many tasks, including developing glycan microarray technologies, developing Luminex high throughput platform technologies for glycomics and the development of bioinformatics and data management software to assist with glycosciences. Additionally, the results of Dr. Mehta's work on these projects are expected to be published and presented in the near future. For example, Dr. Mehta is currently writing a book chapter for *Methods in Molecular Biology* and also a review article for *Molecular & Cellular Proteomics* regarding these topics. In addition, Dr. Mehta was also recently invited to present at internationally renowned conferences: the 7th Canadian Glycomics Symposium and the 10th Warren Workshop to be held in Canada from May 27-29, 2024.

Dr. Mehta's annual salary is $90,100. In addition to the base salary, Dr. Mehta receives fringe benefits, which include 401(k) match, life insurance, medical insurance, dental insurance, and vision insurance. Please do not hesitate to communicate with my office should you have any questions or require any additional information.

Sincerely yours,

Richard D. Cummings, Ph.D.
