Engineering Macrophages for Cell-Based Therapies

S Lee - 2017 - search.proquest.com

In the last decade, the promise of cell-based therapy has come closer to fruition. Although macrophages (M&phgr;) play important roles in immunity, development and homeostatic …

Identification of extracellular matrix-based targets for the prevention of age-related macular degeneration (AMD), a laboratory medicine diagnostic based …

O Algwairi - 2017 - research-repository.rmit.edu.au

There is an increasing recognition that some major diseases are associated with the deposition of lipids in tissues [50, 173, 174, 319]. For example, apolipoproteins on LDL …

Research Article Polysulfated Trehalose as a Novel Anticoagulant Agent with Dual Mode of Action

Q Rashid, M Abid, N Gupta, T Tyagi, MZ Ashraf… - 2015 - academia.edu

Physiological hemostatic balance is a coordinated outcome of counteracting coagulation and fibrinolytic systems. An imbalance of procoagulant and anticoagulant factors may result …

Studies on rationally designed, allosteric, coagulation inhibitors

R Boothello - 2014 - search.proquest.com

Heparin is a natural allosteric modulator, with numerous structural and conformational variations leading to many reports of bleeding complications and variations in anticoagulant …

Kinetic and Thermodynamic Studies of Thrombin Inhibitors

AM Abdel - 2013 - scholarscompass.vcu.edu

Sulfated low molecular weight lignins (LMWLs), CDSO3 and FDSO3, designed recently as macromolecular mimetics of heparin, were found to exhibit potent anticoagulant activity …
