## Evaluation of multivalent sialylated polyglycerols for resistance induction in and broad antiviral activity against influenza A viruses

MN Stadtmueller, S Bhatia, P Kiran… - Journal of medicinal …, 2021 - ACS Publications

The development of multivalent sialic acid-based inhibitors active against a variety of influenza A virus (IAV) strains has been hampered by high genetic and structural variability …

## Glyco-engineered MDCK cells display preferred receptors of H3N2 influenza absent in eggs used for vaccines

C Kikuchi, A Antonopoulos, S Wang… - Nature …, 2023 - nature.com

Evolution of human H3N2 influenza viruses driven by immune selection has narrowed the receptor specificity of the hemagglutinin (HA) to a restricted subset of human-type …

## Sialylated and sulfated N-Glycans in MDCK and engineered MDCK cells for influenza virus studies

L Byrd-Leotis, N Jia, Y Matsumoto, D Lu, Y Kawaoka… - Scientific Reports, 2022 - nature.com

Abstract The Madin-Darby canine kidney (MDCK) cell line is an in vitro model for influenza A virus (IAV) infection and propagation. MDCK-SIAT1 (SIAT1) and humanized MDCK (hCK) …

## Recent Advances in the Chemical Biology of *N*-Glycans

A Shirakawa, Y Manabe, K Fukase - Molecules, 2021 - mdpi.com

Asparagine-linked N-glycans on proteins have diverse structures, and their functions vary according to their structures. In recent years, it has become possible to obtain high quantities …

## Membrane-tethered mucin 1 is stimulated by interferon and virus infection in multiple cell types and inhibits influenza a virus infection in human airway epithelium

E Iverson, K Griswold, D Song, TB Gagliardi… - MBio, 2022 - journals.asm.org

Influenza A virus (IAV) causes significant morbidity and mortality in the human population. Tethered mucin 1 (MUC1) is highly expressed in airway epithelium, the primary site of IAV …

## Avian influenza A viruses exhibit plasticity in sialylglycoconjugate receptor usage in human lung cells

CY Liang, I Huang, J Han, B Sownthirarajan… - Journal of …, 2023 - journals.asm.org

Influenza A viruses (IAV) utilize sialic acid (Sia) containing cell surface glycoconjugates for host cell infection, and IAV strains from different host species show preferences for …

## Changes in sialic acid binding associated with egg adaptation decrease live attenuated influenza virus replication in human nasal epithelial cell cultures

H Powell, H Liu, A Pekosz - Vaccine, 2021 - Elsevier

Abstract Live Attenuated Influenza Virus (LAIV) is administered to and replicates in the sinonasal epithelium. Candidate LAIV vaccine strains are selected based on their ability to …

## Epistasis reduces fitness costs of influenza A virus escape from stem-binding antibodies

CY Lee, V Raghunathan, CJ Caceres, G Geiger… - Proceedings of the …, 2023 - pnas.org

The hemagglutinin (HA) stem region is a major target of universal influenza vaccine efforts owing to the presence of highly conserved epitopes across multiple influenza A virus (IAV) …

## Clade-defining mutations in human H1N1 hemagglutinin protein from 2021-2023 have opposing effects on *in vitro* fitness and antigenic drift

NJ Swanson, J Girish, M Yunker, H Liu, J Norton… - bioRxiv, 2024 - biorxiv.org

Seasonal influenza viruses frequently acquire mutations that have the potential to alter both virus replication and antigenic profile. Recent seasonal H1N1 viruses have acquired …

## Expression of influenza A virus glycan receptor candidates in mallard, chicken, and tufted duck

J Nilsson, P Eriksson, MM Naguib, E Jax… - …, 2024 - academic.oup.com

Influenza A virus (IAV) pandemics result from interspecies transmission events within the avian reservoir and further into mammals including humans. Receptor incompatibility due to …
