Carbohydrates as putative pattern recognition receptor agonists in vaccine development

R Mu, L Dong, C Wang - Trends in immunology, 2023 - cell.com

Adjuvants are essential components of modern vaccines. One general mechanism underlying their immunostimulatory functions is the activation of pattern recognition …

Facile Preparation of Carbohydrate-Containing Adjuvants Based on Self-Assembling Glycopeptide Conjugates

B Wang, S Liu, H Li, W Dong, H Liu… - Angewandte Chemie …, 2024 - Wiley Online Library

Carbohydrates are intriguing biomolecules possessing diverse biological activities, including immune stimulating capability. However, their biomedical applications have been …

Decoding the glycan shield: Immune recognition and response to the HIV-1 envelope trimer

FZ Nawaz, TM Adams, ME Demirturk, FY Avci - Journal of Biological …, 2026 - jbc.org

The HIV-1 envelope glycoprotein (Env) is essential for viral entry and infection of host cells. Composed of a trimer of the gp120–gp41 heterodimeric glycoproteins, the Env trimer is the …

Glycomics and glycoproteomics reveal distinct oligomannose carriers across bladder cancer stages

M Relvas-Santos, D Ferreira, A Brandão… - International Journal of …, 2025 - mdpi.com

Aberrant glycosylation is a hallmark of cancer, offering opportunities to enhance clinical decision-making and enable precise targeting of cancer cells. Nevertheless, alterations in …

An Evolutionary Distinct Nipah Virus N-Glycosylation Site Provides Stability for Receptor Engagement

TE Hawkins, V Calvaresi, SA Burnap… - Molecular & Cellular …, 2026 - mcponline.org

Nipah virus is a deadly paramyxovirus with 40 to 75% mortality and> 750 cases since 1998. Currently there are no clinically approved vaccines or therapeutics to treat infection. Nipah is …

CH− π interactions confer orientational flexibility in protein–carbohydrate binding sites

AM Keys, DW Kastner, LL Kiessling, HJ Kulik - Journal of Biological …, 2025 - jbc.org

Protein–carbohydrate binding plays an essential role in biological processes including cellular recognition and immune signaling. However, glycans are hydrophilic with limited …

Tumor cells express pauci-and oligomannosidic N-glycans in glycoproteins recognized by the mannose receptor (CD206)

K Stavenhagen, LC Laan, C Gao, AY Mehta… - Cellular and molecular …, 2021 - Springer

The macrophage mannose receptor (CD206, MR) is an endocytic lectin receptor which plays an important role in homeostasis and innate immunity, however, the endogenous …

Feasibility of Brewer's spent yeast microcapsules as targeted oral carriers

SF Reis, VJ Martins, R Bastos, T Lima, VG Correia… - Foods, 2023 - mdpi.com

Brewer's spent yeast (BSY) microcapsules have a complex network of cell-wall polysaccharides that are induced by brewing when compared to the baker's yeast …

Advancements and future perspectives in the study of oligosaccharides derived from edible-medicinal mushrooms

S Wang, J Qi, X Cai, W Wu, ZA Wang, S Jiao, C Dong… - Food Bioscience, 2024 - Elsevier

Recent studies have underscored the unique biological activities of oligosaccharides derived from edible-medicinal mushrooms, highlighting their superiority over …

Defining Glycan Recognition by DC-SIGN Using Native Mass Spectrometry

DT Bui, EN Kitova, LK Mahal, JS Klassen - ACS Chemical Biology, 2026 - ACS Publications

Abstract C-type lectins (CTLs), many of which bind carbohydrates (glycans) in a Ca2+-dependent manner, are an important family of glycan-binding proteins that play essential …
