Recent progress in high-throughput and automated characterization of N-glycans in monoclonal antibodies

AS Rathore, A Guttman, A Shrivastava… - TrAC Trends in Analytical …, 2023 - Elsevier

N-glycosylation of monoclonal antibody therapeutics is a post-translation modification and a critical quality attribute because of its significant impact on the bioavailability as well as the …

Functional implications of glycans and their curation: insights from the workshop held at the 16th Annual International Biocuration Conference in Padua, Italy

K Martinez, J Agirre, Y Akune, KF Aoki-Kinoshita… - Database, 2024 - academic.oup.com

Dynamic changes in protein glycosylation impact human health and disease progression. However, current resources that capture disease and phenotype information focus primarily …

Glycoproteomics landscape of asymptomatic and symptomatic human Alzheimer's disease brain

S Suttapitugsakul, K Stavenhagen… - Molecular & Cellular …, 2022 - mcponline.org

Molecular changes in the brain of individuals afflicted with Alzheimer's disease (AD) are an intense area of study. Little is known about the role of protein abundance and …

COVID-19 biomarkers and their overlap with comorbidities in a disease biomarker data model

N Gogate, D Lyman, A Bell, E Cauley… - Briefings in …, 2021 - academic.oup.com

In response to the COVID-19 outbreak, scientists and medical researchers are capturing a wide range of host responses, symptoms and lingering postrecovery problems within the …

Coordinated regulation of PIEZO2 by alternative splicing, post-translational modification, membrane trafficking and protein partners

EI Oribamise, Q Li, MG Garry - The Journal of Physiology, 2026 - Wiley Online Library

PIEZO2 is a principal mechanotransduction channel for somatosensory and interoceptive signalling, yet coordinated regulation of this channel remains poorly understood. Emerging …

GlyGen data model and processing workflow

R Kahsay, J Vora, R Navelkar, R Mousavi… - …, 2020 - academic.oup.com

Glycoinformatics plays a major role in glycobiology research, and the development of a comprehensive glycoinformatics knowledgebase is critical. This application note describes …

Elucidating the molecular role of MUC5B in progressive lung adenocarcinoma: Prospects for early diagnosis

G Ashok, A Soundararajan, A Anbarasu… - Journal of Molecular …, 2024 - Wiley Online Library

Gel-forming mucin MUC5B is significantly deregulated in lung adenocarcinoma (LUAD), however, its role in tumor progression is not yet clearly understood. Here, we used an …

GlycoSiteMiner: an ML/AI-assisted literature mining-based pipeline for extracting glycosylation sites from PubMed abstracts

R Kahsay, U Bhuiyan, CCH Au, N Edwards… - …, 2025 - academic.oup.com

Over 50% of human proteins are estimated to be glycosylated, making glycosylation one of the most common post-translational modifications (PTMs) of proteins. A glycoinformatics …

CHHM: a manually curated catalogue of human histone modifications revealing hotspot regions and unique distribution patterns

W Ma, X Ding, J Xu, TCW Poon - International Journal of …, 2024 - pmc.ncbi.nlm.nih.gov

Histone modification is one of the key elements in epigenetic control and plays important roles in regulation of biological processes and disease development. Currently, records of …

Proteomics-based insights into the SARS-CoV-2–mediated COVID-19 pandemic: a review of the first year of research

JL Praissman, L Wells - Molecular & Cellular Proteomics, 2021 - mcponline.org

In late 2019, a virus subsequently named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) emerged in China and led to a worldwide pandemic of the disease termed …
