Pharmacology and clinical development of factor XI inhibitors

A Greco, C Laudani, M Spagnolo, F Agnello, DC Faro… - Circulation, 2023 - ahajournals.org

Therapeutic anticoagulation is indicated for a variety of circumstances and conditions in several fields of medicine to prevent or treat venous and arterial thromboembolism …

Factor XI inhibitors for the prevention and treatment of venous and arterial thromboembolism

D Capodanno, JH Alexander, MC Bahit… - Nature Reviews …, 2025 - nature.com

Therapeutic anticoagulation is essential to prevent and treat venous and arterial thromboembolism. The available agents target coagulation factors involved in thrombus …

Antithrombotic agents: new directions in antithrombotic therapy

NC Chan, JI Weitz - Circulation research, 2019 - ahajournals.org

Recent advances in our understanding of the contribution of thrombin generation to arterial thrombosis and the role of platelets in venous thrombosis have prompted new treatment …

Identification and anticoagulant mechanisms of novel factor XIa inhibitory peptides by virtual screening of a in silico generated deep-sea peptide database

Y Ouyang, Y Yue, N Wu, J Wang, L Geng… - Food Research …, 2024 - Elsevier

The objective of this study was to identify novel anticoagulant peptides from the deep-sea using multiple in silico methods, and to investigate their inhibitory activity and molecular …

Factors XI and XII as targets for new anticoagulants

JI Weitz, JC Fredenburgh - Frontiers in Medicine, 2017 - frontiersin.org

Compared with vitamin K antagonists, the direct oral anticoagulants (DOACs) are simpler to administer and are associated with less intracranial bleeding. Nonetheless, even with the …

New developments in anticoagulants: past, present and future

JI Weitz, J Harenberg - Thrombosis and haemostasis, 2017 - thieme-connect.com

Thrombosis is a leading cause of death and disability worldwide, and anticoagulants are the mainstay of its prevention and treatment. Starting with unfractionated heparin (UFH) and …

Factor XI and contact activation as targets for antithrombotic therapy

D Gailani, CE Bane, A Gruber - Journal of Thrombosis and …, 2015 - Wiley Online Library

The most commonly used anticoagulants produce therapeutic antithrombotic effects either by inhibiting thrombin or factor Xa (FXa) or by lowering the plasma levels of the precursors of …

Discovery of an intrinsic tenase complex inhibitor: Pure nonasaccharide from fucosylated glycosaminoglycan

L Zhao, M Wu, C Xiao, L Yang, L Zhou, N Gao… - Proceedings of the …, 2015 - pnas.org

Selective inhibition of the intrinsic coagulation pathway is a promising strategy for developing safer anticoagulants that do not cause serious bleeding. Intrinsic tenase, the …

Allosteric inhibition as a new mode of action for BAY 1213790, a neutralizing antibody targeting the activated form of coagulation factor XI

M Schaefer, A Buchmueller, F Dittmer… - Journal of molecular …, 2019 - Elsevier

Factor XI (FXI), the zymogen of activated FXI (FXIa), is an attractive target for novel anticoagulants because FXI inhibition offers the potential to reduce thrombosis risk while …
