Glycomics and Infection Progress: Exploring the Role of Mucuna pruriens (L.) Dc., in Modulating Host-Pathogen Interactions

P Prakash, B Deepan, N Ganesh, S Balaji… - Functional …, 2026 - api.taylorfrancis.com

Glycomics, the study of carbohydrates, has become crucial in understanding host-pathogen interactions. My chapter explored the complex relationship between glycosylation patterns …

Glycoinformatics: Advances in Glycan Data Integration and Analysis

SY Hsiung, A Zappa, Y Akune-Taylor… - Functional …, 2026 - api.taylorfrancis.com

Glycoinformatics originated with pioneering initiatives like CarbBank in the 1980s, which represented the first systematic digital repository for carbohydrate structures. Despite this …

Sialic acid-dependent binding and viral entry of SARS-CoV-2

L Nguyen, KA McCord, DT Bui… - Preprint at https …, 2022 - assets-eu.researchsquare.com

Emerging evidence suggests that host glycans influence infection by SARS-CoV-2. Here, we reveal that the receptor-binding domain (RBD) of the spike (S)-protein on SARS-CoV-2 …

O-GlcNAcAtlas: a database of experimentally identified O-GlcNAc sites and proteins

J Ma, Y Li, C Hou, C Wu - bioRxiv, 2020 - biorxiv.org

ABSTRACT O-linked β-N-acetylglucosamine (O-GlcNAc) is a post-translational modification (ie, O-GlcNAcylation) on serine/threonine residues of proteins. As a unique intracellular …

GlyEnzEA: reaction-informed enrichment of enzyme-centered glycan sets from glycomics data

K Himori, B Zhang, Y Matsui - bioRxiv, 2026 - biorxiv.org

Enzyme-centered interpretation of glycomic changes requires testing whether glycans associated with particular reactions change collectively. Motif analyses and reaction …

Glycosylation as regulator of human B-cell leukaemias in bone marrow

N Heisterkamp - Frontiers in Hematology, 2023 - frontiersin.org

Leukemic B-cells are lodged in the bone marrow [BM], a complex organ composed of many cell types and extracellular matrix. Determining how the reciprocal interactions between …

Sensitive spatiotemporal tracking of spontaneous metastasis in deep tissues via a genetically-encoded magnetic resonance imaging reporter

NN Nyström, SW McRae, FFM Martinez, JJ Kelly… - bioRxiv, 2022 - biorxiv.org

Metastasis remains a poorly understood aspect of cancer biology and the leading cause of cancer-related death, yet most preclinical cancer studies do not examine metastasis …

A computational study of the Low-Density Lipoprotein Receptor-Related Protein 1 and its ligands

GM Tuveri - 2026 - tdx.cat

[eng] This thesis investigates the structure, dynamics, and molecular recognition properties of the low-density lipoprotein receptor–related protein 1 (LRP1), a key receptor at the blood …

Engineering AAV tropism: DARPin-mediated retargeting enables specific gene delivery to lymphocyte subtypes

LJ Zinser - 2025 - publikationen.ub.uni-frankfurt.de

Gene therapy has made significant advances in recent decades, particularly through the use of adeno-associated viral vectors (AAVs). These vectors are well-established tools …

Implication of N-glycosylation in the maintenance and degeneration of photoreceptors in the Japanese rice fish Oryzias latipes

E Sanchez Salvador - 2025 - archiv.ub.uni-heidelberg.de

Glycosylation is a ubiquitous post-translational modification essential for protein folding, stability, and function. Defects in glycosylation pathways cause congenital disorders of …
