Peptidomic characterization and evaluation of in vitro and in vivo anticoagulant activities of proteinase K hydrolysates from the deep-sea cold seep clam Archivesica …

Y Ouyang, Y Yue, H Chen, J Wang, N Wu, L Geng… - Food Bioscience, 2026 - Elsevier

Thrombosis is a major pathological driver of cardiovascular diseases, creating demand for safe, food-derived anticoagulants with reduced bleeding risk. Here, a bioactive hydrolysate …

Sulfated non-saccharide glycosaminoglycan mimetics as novel drug discovery platform for various pathologies

DK Afosah, RA Al-Horani - Current medicinal chemistry, 2020 - benthamdirect.com

Glycosaminoglycans (GAGs) are very complex, natural anionic polysaccharides. They are polymers of repeating disaccharide units of uronic acid and hexosamine residues. Owing to …

Allosteric inhibition of human factor XIa: discovery of monosulfated benzofurans as a class of promising inhibitors

MD Argade, AY Mehta, A Sarkar… - Journal of medicinal …, 2014 - pmc.ncbi.nlm.nih.gov

Factor XIa (fXIa) is being recognized as a prime target for developing safer anticoagulants. To discover synthetic, small, allosteric inhibitors of fXIa, we screened an in-house, unique …

Modulating the degree of fucosylation of fucosylated chondroitin sulfate enhances heparin cofactor II-dependent thrombin inhibition

L Xu, N Gao, C Xiao, L Lin, SW Purcell, M Wu… - European Journal of …, 2018 - Elsevier

Fucosylated chondroitin sulfate (FCS), an unusual glycosaminoglycan with fucose side chains, is a promising anticoagulant agent. To assess the effect of its structure on …
