Merging cultures and disciplines to create a drug discovery ecosystem at Virginia commonwealth university: Medicinal chemistry, structural biology, molecular …

GE Kellogg, Y Cen, M Dukat, KC Ellis, Y Guo, J Li… - SLAS Discovery, 2023 - Elsevier

Abstract The Department of Medicinal Chemistry, together with the Institute for Structural Biology, Drug Discovery and Development, at Virginia Commonwealth University (VCU) has …

Structure–activity relationship studies for multitarget antithrombotic drugs

AR Neves, M Correia-da-Silva, E Sousa… - Future medicinal …, 2016 - Taylor & Francis

Thrombosis is a complex process involving multiple pathways. Currently, therapy relies on the combination of two or more antithrombotic drugs, showing that inhibiting more than one …

A Robust Proteomics-Based Method for Identifying Preferred Protein Targets of Synthetic Glycosaminoglycan Mimetics

DK Afosah, R Ongolu, RM Fayyad, A Hawkridge… - …, 2025 - pmc.ncbi.nlm.nih.gov

A robust technology is critically needed for identifying preferred protein targets of glycosaminoglycans (GAGs), and synthetic mimetics thereof, in biological milieu. We present …

Thrombin Exosite Maturation and Ligand Binding at ABE II Help Stabilize PAR Binding Competent Conformation at ABE I

R Billur, TM Sabo, MC Maurer - Biochemistry, 2019 - pmc.ncbi.nlm.nih.gov

Thrombin, derived from zymogen prothrombin (ProT), is a serine protease involved in procoagulation, anticoagulation, and platelet activation. Thrombin's actions are regulated …

Lignin to platform chemicals and biomaterials: chemical and biological perspectives

YN Reddy, K Gogde, S Paul… - Biomass for Bioenergy …, 2021 - taylorfrancis.com

Lignin is the second most available biopolymer on earth after cellulose which provides rigidity and microbial resistance in higher plants. Lignin has been known for its antimicrobial …

Present and future prospective of lignin-based materials in biomedical fields

W Gao, F Kong, J Chen, P Fatehi - Lignin-Based Materials for Biomedical …, 2021 - Elsevier

Lignin is a bio-based material with tremendous applications in different fields. In this chapter, the potential use of lignin in the medical field is discussed. This chapter discusses the status …

Studies on fragment-based design of allosteric inhibitors of human factor XIa

RS Boothello, NV Sankaranarayanan… - Bioorganic & medicinal …, 2020 - Elsevier

Human factor XIa (hFXIa) has emerged as an attractive target for development of new anticoagulants that promise higher level of safety. Different strategies have been adopted so …

Inhibition of thrombin by functionalized C60 nanoparticles revealed via in vitro assays and in silico studies

Y Liu, J Fu, W Pan, Q Xue, X Liu, A Zhang - Journal of Environmental …, 2018 - Elsevier

The studies on the human toxicity of nanoparticles (NPs) are far behind the rapid development of engineered functionalized NPs. Fullerene has been widely used as drug …

Murine models in the evaluation of heparan sulfate-based anticoagulants

BM Mohammed, Q Cheng, IS Ivanov… - … : Methods and Protocols, 2021 - Springer

Evaluating prospective anticoagulant therapies in animal thrombosis and bleeding models are standard pre-clinical approaches. Mice are frequently used for initial evaluations …

Deciphering conformational changes associated with the maturation of thrombin anion binding exosite I

R Billur, D Ban, TM Sabo, MC Maurer - Biochemistry, 2017 - pmc.ncbi.nlm.nih.gov

Thrombin participates in procoagulation, anticoagulation, and platelet activation. This enzyme contains anion binding exosites, ABE I and ABE II, which attract regulatory …
