## Protein tyrosine sulfation: from molecular mechanisms and pathophysiology to analytical advances and therapeutic translation

W Liu, Q Zou, W Liu, Z Huang - Biochemical Pharmacology, 2026 - Elsevier

Protein tyrosine sulfation (PTS), catalyzed by the Golgi-resident tyrosylprotein sulfotransferases 1 and 2 (TPST1 and TPST2) using 3′-phosphoadenosine 5 …

## Mass spectrometry (MS)-based proteomics and the sulfome: clinical potential

SO Oswald, LA Daly, S Mesdaghi, S Jones… - Expert review of …, 2025 - Taylor & Francis

Introduction Protein tyrosine sulfation is of growing scientific interest due to its biological and clinical significance, yet it remains an underexplored post-translational modification (PTM) …

## Targeting GALNT4 suppresses atherosclerosis via TNFR1/NF-κB mediated attenuation of endothelial inflammation

P Wei, D Li, W Chen, X Zhang, W Xinru, Z Han… - Cellular …, 2025 - Elsevier

Endothelial inflammation is a critical driver of atherosclerosis (AS). Although N-acetylgalactosaminyltransferase 4 (GALNT4) has been genetically linked to coronary artery …

## Emerging roles of UDP-GalNAc Polypeptide N-Acetylgalactosaminyltransferases in Cardiovascular Disease

L Guo, L Zhou, P Wei, S Li, S He, D Li - Aging and Disease, 2024 - pmc.ncbi.nlm.nih.gov

UDP-GalNAc polypeptide N-acetylgalactosaminyltransferases (GalNAc-Ts) catalyze mucin-type O-glycosylation by transferring α-N-acetylgalactosamine (GalNAc) from UDP-GalNAc to …

## Synthesis of sulfonated peptides using a trifluoromethyltoluene-protected amino acid

AE DeYong, K Li, EL Chaikof - The Journal of Organic Chemistry, 2025 - ACS Publications

A scalable, seven step synthesis is reported for a trifluoromethyl toluene protected sulfonated phenylalanine building block whose utility was demonstrated in the synthesis of …

## Red Blood Cells and Their Immunoregulatory Role

A Risso, G Antonutto - Medical Principles and Practice, 2025 - karger.com

The physiological roles played by red blood cells (RBCs), ie, oxygen transport to all cells and tissues, CO 2 delivery to the lungs, control of pH in blood, and ions transport into and …

## Expression of functionally glycosylated PSGL-1 in ALK-positive anaplastic large cell lymphoma

N Yonemoto, M Fukushima, H Hoshino… - … -Research and Practice, 2025 - Elsevier

Anaplastic lymphoma kinase (ALK)-positive (ALK+) anaplastic large cell lymphoma (ALCL) is defined as a CD30-positive mature T-cell lymphoma characterized by proliferation of large …

## PSGL-1: A Universal Selectin Ligand or a Signaling Molecule?(Review of the Literature)

NV Korotkova, RE Kalinin, IA Suchkov… - Molecular Biology, 2025 - Springer

Interactions of intercellular adhesion molecules of the selectin family with glycoconjugates of cell membranes mediate the initial stage of the adhesion cascade, which recruits leukocytes …

## Inhibition of mucin-type *O*-glycosylation impairs melanogenesis, melanoma growth, and metastatic capacity

T Jain, A Rajasekharan, SK Gorai, A Rajan, N Perumal… - bioRxiv, 2026 - biorxiv.org

Abstract Treatment of malignant and metastatic melanoma remains a clinical challenge, despite the success of immune checkpoint blockade and kinase inhibitors, highlighting the …

## NMR indicates the N-termini of PSGL1 and CCR7 bind competitively to the chemokine CCL21

RN Witt, KS Nickel, JR Binns, AM Gray, AM Hintz… - … and Biophysics Reports, 2023 - Elsevier

Chemokines are from a family of secreted cytokines that direct the trafficking of immune cells to coordinate immune responses. Chemokines are involved in numerous disease states …
