Insights into glycobiology and the protein-glycan interactome using glycan microarray technologies

J Heimburg-Molinaro, AY Mehta, CA Tilton… - Molecular & Cellular …, 2024 - mcponline.org

Glycans linked to proteins and lipids and also occurring in free forms have many functions, and these are partly elicited through specific interactions with glycan-binding proteins …

A pair of promising immune checkpoints PSGL-1 and VISTA from immunotolerance to immunotherapy

M Peng, X Lu, J Guo, X Yin, J Zhang, X Li, Y Zou - Biomarker Research, 2024 - Springer

Immune checkpoints are crucial for regulating immune responses and maintaining self-tolerance, as they play a pivotal role in preventing autoimmunity and facilitating tumor …

Map of the neuronal O-glycoproteome reveals driver functions in the regulated secretory pathway

TD Madsen, AB Topaktas, LA Dworkin, J Hintze… - Journal of Biological …, 2025 - jbc.org

Impairments in protein glycosylation, including O-GalNAc-type glycosylation, are linked to severe developmental disorders with prominent neurological involvement. However, the role …

Truncated *O*-glycosylation in metastatic triple-negative breast cancer reveals a gene expression signature associated with extracellular matrix and proteolysis

MF Festari, E Jara, M Costa, A Iriarte, T Freire - Scientific reports, 2024 - nature.com

Breast cancer (BC) is the leading cause of death by cancer in women worldwide. Triple-negative (TN) BC constitutes aggressive and highly metastatic tumors associated with …

Discovery and characterization of vertebrate sialoglycan-binding proteins

L Adler, S Yehuda, A Varki, V Padler-Karavani - Seminars in immunology, 2025 - Elsevier

All known life forms feature a dense ensemble of cell surface and extracellular glycans. In vertebrates this includes a high density of sialic acids (Sias), a family of acidic sugars …

An in vitro approach for simulating divergent Golgi *O*-glycosylation of tumor-associated MUC1 from normal MUC1

A Nashed, K Dilsook, T Senapathi… - Nature Communications, 2026 - nature.com

Peptide O-glycosylation relies on the coordinated action of glycosyltransferases across the endoplasmic reticulum (ER) and Golgi apparatus. However, the molecular mechanisms …

Charge matters: how flanking substrate charge modulates O-glycan Core elongation

CJ Ballard, MR Smutny, LD Chau, CK Wong… - …, 2025 - academic.oup.com

Mucin type O-glycan core elongation is typically performed by the C1GALT1, B3GNT6, and ST6GalNAc-I/-II O-glycosyltransferases. These enzymes target the Tn antigen (GalNAc-O …

Evolution and diversity of glycomolecules from unicellular organisms to humans

RD Cummings - BioCosmos, 2024 - reference-global.com

The emergence of glycomolecules in nature coincided with the dawning of the ribonucleic acid (RNA) and deoxyribonucleic acid (DNA) world, along with the development of a …

Pathophysiological contributions of P-selectin glycoprotein ligand-1 to early-and late-onset colorectal cancer

SD Zaongo, I Bado - Biomedicine & Pharmacotherapy, 2026 - Elsevier

The incidence of early-onset colorectal cancer (CRC) is rising steadily alongside traditional late-onset disease, yet the pathophysiological mechanisms distinguishing these two entities …

Chemical Strategies for Controlling Sulfation in Biomacromolecules

C Liu, X Liu, Y Deng, J Niu - ACS chemical biology, 2026 - pmc.ncbi.nlm.nih.gov

Sulfation is a fundamental post-translational modification that imparts negative charge and structural complexity to biomolecules, thereby regulating molecular recognition, signaling …
