Discovery methods of coagulation-inhibiting drugs

A Gomez-Outes, M Garcia-Fuentes… - Expert Opinion on …, 2017 - Taylor & Francis

Introduction: In the last decade, several direct oral anticoagulants (DOAC) targeting thrombin (dabigatran) or activated factor X (FXa)(rivaroxaban, apixaban and edoxaban) have been …

Allosteric inhibition of human factor XIa: discovery of monosulfated benzofurans as a class of promising inhibitors

MD Argade, AY Mehta, A Sarkar… - Journal of medicinal …, 2014 - pmc.ncbi.nlm.nih.gov

Factor XIa (fXIa) is being recognized as a prime target for developing safer anticoagulants. To discover synthetic, small, allosteric inhibitors of fXIa, we screened an in-house, unique …

Sulfotransferase and heparanase: remodeling engines in promoting virus infection and disease development

DD Kaltenbach, D Jaishankar, M Hao… - Frontiers in …, 2018 - frontiersin.org

An extraordinary binding site generated in heparan sulfate (HS) structures, during its biosynthesis, provides a unique opportunity to interact with multiple protein ligands including …

A molecular dynamics-based algorithm for evaluating the glycosaminoglycan mimicking potential of synthetic, homogenous, sulfated small molecules

B Nagarajan, NV Sankaranarayanan, BB Patel… - PLoS …, 2017 - journals.plos.org

Glycosaminoglycans (GAGs) are key natural biopolymers that exhibit a range of biological functions including growth and differentiation. Despite this multiplicity of function, natural …

The promise of sulfated synthetic small molecules as modulators of glycosaminoglycan function

UR Desai - Future Medicinal Chemistry, 2013 - Taylor & Francis

Future Med. Chem.(2013) 5 (12) 1364 future science group electropositive domain. Some of these proteins may transduce a signal, form a gradient, remain active for a prolonged time …

The research progress of direct thrombin inhibitors

ZG Sun, JM Zhang, SC Cui, ZG Zhang… - Mini Reviews in …, 2020 - benthamdirect.com

Blood coagulation is the process of changing the blood from the flowing state to the gel state. It is an important part of the hemostatic function. Coagulation is a process by which a …

Fully Synthetic Non-Carbohydrate Heparin Mimetics—Perspectives for Therapeutic Anticoagulation and Beyond?

K Nekipelov, V Ferro, G Bendas - Archiv der Pharmazie, 2026 - Wiley Online Library

Heparin is one of the oldest drugs on the market. Although clinically well established as an anticoagulant for decades, owing to its natural origin and heterogeneous …

Discovery of novel N-acylpyrazoles as potent and selective thrombin inhibitors

KM Short, MA Estiarte, SM Pham, DC Williams… - European Journal of …, 2023 - Elsevier

Direct oral anticoagulants (DOACs), which includes thrombin and factor Xa inhibitors, have emerged as the preferred therapeutics for thrombotic disorders, penetrating a market …

A small group of sulfated benzofurans induces steady-state submaximal inhibition of thrombin

DK Afosah, S Verespy III, RA Al-Horani… - Bioorganic & Medicinal …, 2018 - Elsevier

Despite the development of promising direct oral anticoagulants, which are all orthosteric inhibitors, a sizable number of patients suffer from bleeding complications. We have …

Allosteric inhibition of factor XIIIa. Non-saccharide glycosaminoglycan mimetics, but not glycosaminoglycans, exhibit promising inhibition profile

RA Al-Horani, R Karuturi, M Lee, DK Afosah, UR Desai - PloS one, 2016 - journals.plos.org

Factor XIIIa (FXIIIa) is a transglutaminase that catalyzes the last step in the coagulation process. Orthostery is the only approach that has been exploited to design FXIIIa inhibitors …
